

Metrik.

186 range

The Metrik cantilever chair stands apart for its sculptural shape. The different thicknesses of materials, polygonal areas and rounded edges are reminiscent of modern transportation design. It has taken until today to make such a complex structure from one piece of material.

The seat and the tubular frame are the same colour to lend greater emphasis to the integrated design. The spacious shape of the inside of the chair with its integrated seat cushion offers ergonomic comfort which can be further enhanced by extra cushioning at the back. The distinct design and the range of colourways mean that Metrik can be seamlessly incorporated into a diverse range of design worlds and with a chrome-plated frame it's also stackable.

Metrik
Design: whiteID

Model 186/3
coated white with a
textured matt finish
and seat cushion

State-of-the-art manufacturing methods and a three-component design add up to an attractive price and good value. A choice of six colours for the body and frame and plenty of different options and colours for the covers ensure huge design scalability. To suit preferences, Metrik either complements the overall design concept or purposely adds a splash of colour.

186/3

186 Four-wheeled trolley for 8 cantilevers

187 Inline connector 2 for bright chrome-plated frame
