KUSCH+CO

Architectural seating with a straightforward, warm and elegant design. The upholstered benches are suited for places where people meet and engage in conversation in a laid-back atmosphere. For foyers, lounges, or waiting areas in hotels and the hospitality industry, in golf clubs, in health care facilities, residential care and nursing homes, hospitals, and many other contract environments.

Design by Dieter Kusch

After having completed his training as furniture maker, he went on to study at the Technical College for Wood Engineering, where he soon showed a keen interest in design. Dieter Kusch started working for the family business in 1963, and took over the company in the second generation in 1969 after his father's untimely death. Apart from his function as managing director, he was personally involved in the development and design of new series.

Variations

Vega armchair on wooden framell

The gently arched wooden frame of these armchairs is entirely manufactured from solid beech, featuring a comfortably upholstered seat pad.

Vega armchair with high backrest on wooden framell

This model has a higher backrest and is therefore even more comfortable. In addition, the upholstery of all models of the series Vega is executed with elegant darts.

Vega 2,5-seater on wooden frame

The bench is an extension of the armchair with a low back, so to speak. With measuring more than 150 cm in width, either two or three persons can comfortably take a seat.

Vega armchair on sled metal frame

The armchair's upholstered pads appear to be floating on top of the slender sled-base frame.

Vega 2,5-seater on sled metal frame

Two up to three persons can take a seat on this bench. Characterised by the same design language as the armchair, the bench appears to be floating.

Accessories

- Plastic glides
- Plastic glides with felt
- Protect glides
- Optional seat height 50 cm

Weight: 17.5 kg

Vega armchair with high backrest on wooden framell

Accessories

- Plastic glides
- Plastic glides with felt
- Protect glides
- Optional seat height 50 cm

Weight: 19.5 kg

¹ The DIN seat height was determined acc. to DIN EN 1335-1, i.e. the seat height measured by means of a measuring device at the position of the ischial tuberosity (sitting bones) after having placed a load of 50 kg on the half width of the seat.

Weight: 44.0 kg

¹ The DIN seat height was determined acc. to DIN EN 1335-1, i.e. the seat height measured by means of a measuring device at the position of the ischial tuberosity (sitting bones) after having placed a load of 50 kg on the half width of the seat.

Materials

Vega

Frame, armrests

- Natural beech or stained (wooden-frame models)
- Chrome or satin chrome steel (metal-frame models)
- Open side parts (wooden-frame models)
- Upholstered side parts, upholstered armrests (metal-frame models)

Seat and backrest

- Upholstered pads with darts
- Standard foam
- Optional available with upholstery with flame retardant foam resp. with flame retardant foam and fireproof fabric

Depending on the environment, contract seating has to be able to fulfil very specific requirements. Interior designers and planners sometimes have to clear difficult hurdles: such as exacting fire prevention regulations, seating suited for people with reduced mobility. Kusch+Co has worked out individual solutions:

Fire Prevention

Wooden parts

As standard, wooden parts are protected by a UV curing, environmentally harmless, water-based lacquer meeting all the requirements of “low flammability” acc. to DIN EN 13501 B s2 d0.

Upholstery

The upholstery is optionally available with flame retardant foam. In addition, it is available with the Kusch+Co Fire Prevention Concept, consisting of a special fabric “flamline” (approved by the building authorities and A2 nonflammable according to DIN 4102) between the upholstery foam and the fabric.

This concept achieves four life-saving objectives. The seating:

- is self-extinguishing,
- reduces the smoke development,
- prevents an incipient fire from spreading out,
- does not turn into an additional ignition source.

Test reports in compliance with national and international standards document the laboratory fire tests conducted on different series finished with a wide variety of materials.

With regard to the upholstery, e.g. with leather, artificial leather as well as many textile fabrics, or to our unupholstered variations featuring a plywood, laminated or plastic seat shell, most of our series meet the following standards:

- Germany: DIN 66084 P-a
- France: NF D 60-013
- Great Britain: BS 5852 Crib 5
- Italy: UNI 9176
- Europe: EN 1021 part 1/2

Please contact us if you wish to receive the test reports.

Reduced Mobility

Many people experience mobility difficulties, among them are senior citizens, pregnant women, persons of short stature, as well as persons with an individual disability. Sitting can be quite a hurdle, as they may have difficulties in taking a seat or getting up from normal seating. In this case, the standard seat height of 42 or 45 cm is usually too low.

Seating has to fulfil the following requirements for persons with reduced mobility:

- Seat height of at least 48 cm
- Seat surfaces enabling them to sit upright and to get up more easily
- Stable arms providing good support
- The legs should be positioned as vertically as possible, so that they don't become a tripping hazard

All variations on wooden frame of series Vega are available with a standard-issue seat height of 45 cm, or with an optional seat height of 50 cm. On top of this, they feature stable armrests and nearly perpendicular legs.

Please contact us to receive further information.

Quality, sustainability

Excerpt

Quality

Our environmental and quality management systems are certified acc. to DIN EN ISO 14001:2015 and to DIN EN ISO 9001:2015. External audits as well as our in-house laboratory safeguard our quality level.

All variations of series Vega meet the requirements with regard to stability, static and dynamic load as well as strength and durability in compliance with the current European Directives, standards and regulations.

On top of this, we test most of our contract seating with higher loads and cycles. On request, we conduct individual tests acc. to the customer's specifications.

We are certified in compliance with DIN EN ISO 9001:2015. In our own laboratory, we test our products before their market launch whether they comply with the normative requirements applicable to contract seating, task chairs, and tables, and issue a Declaration of Conformity.

We happily make these Declarations of Conformity as well as our brochure "Mission Statement Quality" providing detailed information on our test procedures available to you – please contact us.

Sustainability

Kusch+Co products stand for long life cycles and optimum recyclability. From the first design drafts of a new product, we take all environmental-relevant components and production processes into consideration, ranging from the materials selection and the design all the way to the manufacturing processes which also contribute towards our sustainable energy balance.
